
PET LOFT™ COMFORT SYSTEM

Many Van Winkle pet beds are available with PetLoft™, a collection of the world's finest fibers, fabrics and foams. A mix of the materials listed below can be found in every Van Winkle bed featuring PetLoft™.

Patented Filling Materials. This primary component has the ability to never lose its unique loft, shape and structural integrity. Each wisp of patented filling material is as unique as an individual snowflake and as feather-light as the softest imported down. The comfort is superior to other filling materials as the individual fibers nestle next to each other to conform to the body.

Cluster Fiber. Three individual cluster fibers have the incomparable ability to hold their shape and return to their high-loft, even after extended use and repeated machine washing. In fact, they actually get puffier each time they are laundered and dried.

Silver. Silver fiber technology is one of the most recent revelations in the soft goods industry. Silver fibers are thermodynamic, allowing pets to sleep cool in the summer and just right in the winter. Additionally, this fill material is virtually microbe-free and bacterially safe, yet all natural, containing no chemicals or harmful compounds that might irritate pets.

Wool. The fine, down characteristic of this wool makes it unrivaled compared to other pet beds and provides breathability, softness and unsurpassed luxury. Wool naturally allows the body to regulate temperature to sleep cool in the summer and toasty in the winter. The synergies created with 100% wool and the thermodynamic properties of silver boost the breathable characteristics of both materials to create a pet pillow with unsurpassed comfort.
